Department: LMS

## **- Abstract**

Nepal is a developing country, and information, communication, and technology play critical roles in the country's growth. Buying and selling products or services over electronic systems such as the Internet and other computer networks is referred to as ecommerce. In Nepal, we have relatively few options for paying bills or trading online. But that doesn't rule out the possibility. There are new participants on the Nepali scene, such as Paybill and Esewa, who wish to change the way the Nepali ecommerce business is approached. With the introduction of these services, many new businesses will be able to sell their goods and services online.

## **-Introduction**

merobazar.com is FREE online classified which enables individuals as well as companies to list wide variety of new or used product online. We at merobazar. com believe that Internet is a great promotional vehicle as well as communication channel for connecting buyers and sellers. Hamrobazar.com is perfect solution which helps to list your products for free. This website is made using HTML/CSS/PHP and my sql database and here also jQuery.

This project is mainly divided into two main categories: The Administrators and Customers/Users. The store manager and the staff members operate as the administrators. They can add, edit, update products or, delete products thus they are able to change the names of products, change prices and, add or remove products. The customer can search for products selection, update the cart, remove products from the cart and check out from the shop. The customer is also able to update his information such as names, address and other data. The User is only able to browse the online shop and add a product to the cart. The user is limited to the use of the shop.

## **- Features**

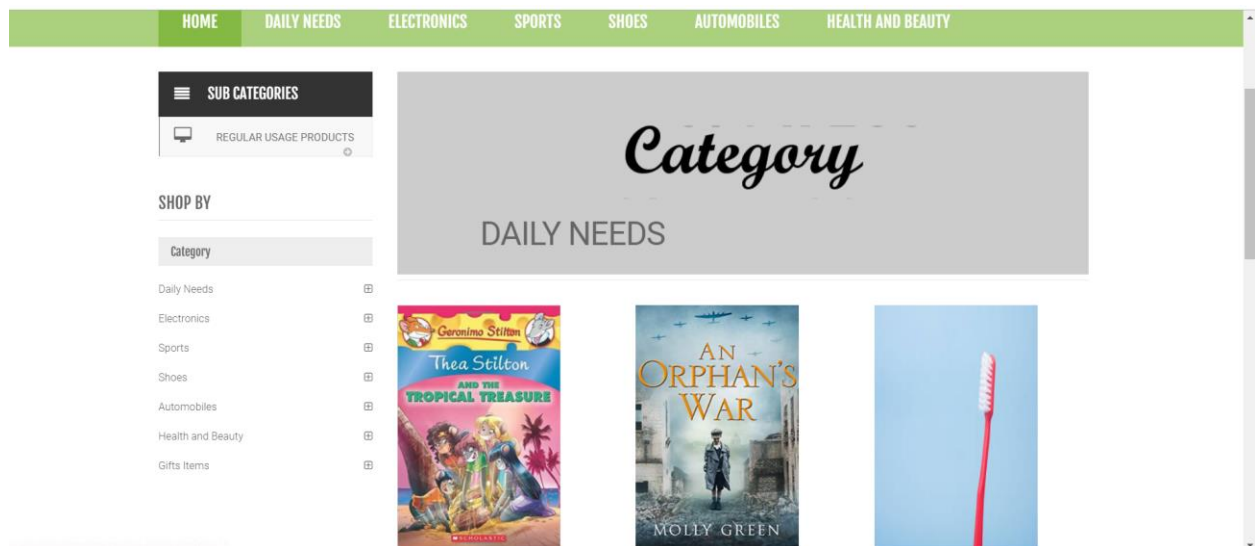

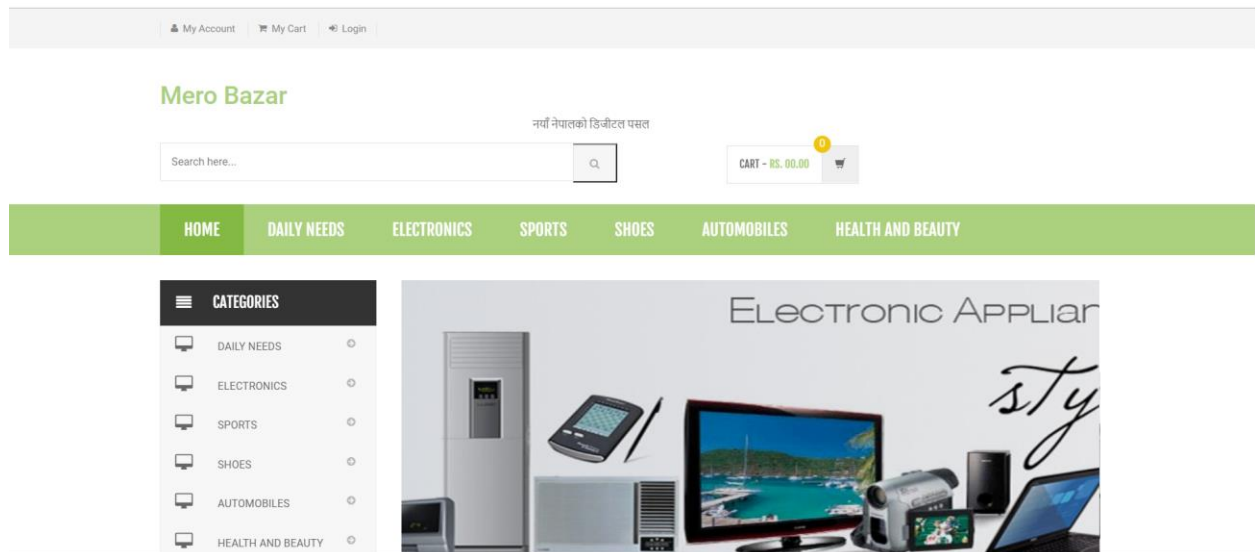

Feature of mero bazar website

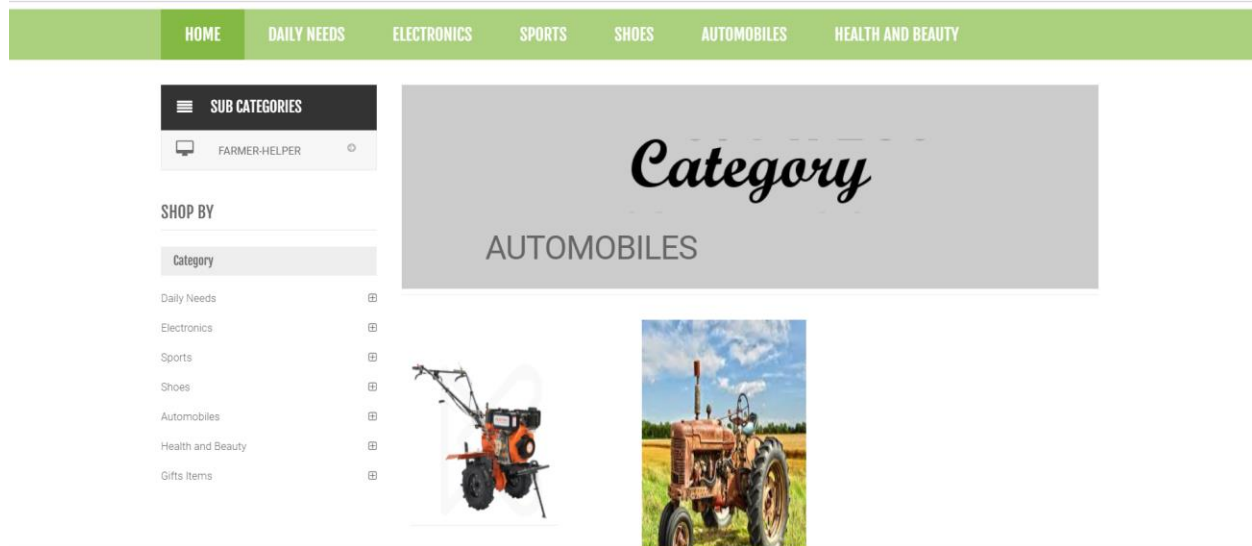

- Admin panel
- Customer panel
- Cart implementation
- User authentication
- Track record
- Manage product
- Product categories
- CRUD operation

- Many more

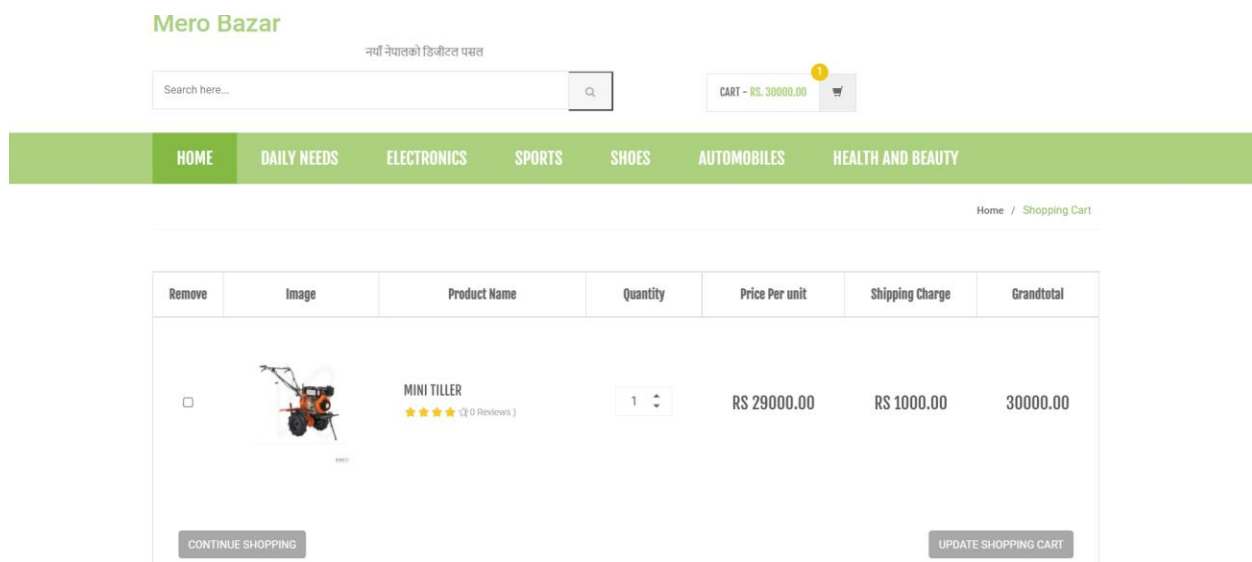

## - Testing

## - Conclusion

As a result, the modest project of a Ecommerce project (mero bazar) has been completed. It is fully functional and meets all of the requirements. The application runs without errors and work properly real life e commerce website like darz gyapu. This website is fully functional we can use it on real life business. The electronic shop was developed using PHP, MySQL, HTML5 and CSS3 technology. Any consumer can browse products, add, replace or delete a product from the cart. The consumer can log in, with his information such as his email and password. If the login does not go through, the user can re-register or ask to change the password. After login, the user can see the product in the cart and proceed onwards. The product can be paid with PayPal. The administrator can verify the order, However the consumer can still look at the orders in his or her account. The ordered price is saved in the database.

Complete source code is available on github : [https://github.com/Pradeep-Dhakal/Ecommerce\\_Website](https://github.com/Pradeep-Dhakal/Ecommerce_Website)
